EDUCATION

Rutgers University

Bachelor of Arts in Information Technology and Informatics

Major GPA: 3.813

New Brunswick, NJ

Expected December 2027

Union College

Associate of Science in Computer Science

Cranford, NJ

May 2022 — May 2024

- Awarded the **National Science Foundation Scholarship** for academic excellence and commitment to computer science.
- Named to the President's High Honor List for outstanding academic achievement.

RELEVANT EXPERIENCE

Rutgers University – Digital Classroom Services

IT Support Specialist

New Brunswick, NJ

September 2026 – Present

- Provide Tier 1 technical support via phone helpdesk, remotely diagnosing and resolving AV, display, and audio issues across university classroom technology systems.
- Deploy on-site to classrooms as needed, performing live troubleshooting of projectors, displays, and audio equipment alongside instructors during active class sessions.
- Conduct scheduled classroom technology audits, testing AV systems and peripheral equipment to verify functionality before scheduled use.
- Document all incidents and resolutions in the ticketing system, maintaining records for both resolved and escalated cases to support operational continuity.

Extern, Amazon Operational Strategy & Analytics

Extern, Inc.

Remote

January 2026 — February 2026

- Analyzed workforce and employee-review data using Python (**Pandas, scraping, sentiment analysis**) to identify key themes in associate experience and operational pain points.
- Applied people analytics and root-cause frameworks to translate unstructured text into actionable insights on turnover, burnout, and communication gaps for fulfillment center operations.
- Produced an insight memo and presentation-style summary practicing data storytelling, prioritization, and business-focused recommendations for non-technical stakeholders.

PROJECTS

Smart Pantry & Inventory System | Java, Spring Boot, Git, H2 Database

- Developed a full-stack inventory management application using Spring Boot and MVC architecture to track grocery and household items.
- Engineered a custom **Comparator-based sorting algorithm** in Java to automatically prioritize inventory, ensuring "Low Stock" and "Expiring Soon" items appear first.
- Implemented **Spring Data JPA** with custom derived queries to enable real-time search and category filtering functionality with configured file-based **H2 Database** persistence to ensure data durability across application restarts.

Homelab Infrastructure & Monitoring Stack | Linux, Docker, Networking, Git

- **Architected a multi-node network** using a Raspberry Pi 5 Gateway, managed switching, and secured Mesh VPN (Tailscale) for remote administration.
- **Deployed containerized services** (Docker) including Uptime Kuma for real-time network health monitoring and latency tracking.

SKILLS

- **Languages & Frameworks:** Python, Java, SQL, Bash, HTML/CSS, Docker, Docker Compose, Linux basics, CI/CD basics
- **Systems & Networking:** TCP/IP, SSH, VPN (Tailscale), Raspberry Pi, Server Administration
